BROWSER-BASED OCR

Every image has text. Get it out.

A quiet, private OCR studio. It cleans the photo, reads the page and hands you a file you can actually use — without uploading anything.

Photos · Scans · Screenshots · Multi-language pages

HOW IT WORKS

01
Upload
Drop a PNG, JPG or WEBP. Crop to the text so the margins and background are ignored.

02
Read
Shadows and noise are removed, then Tesseract reads the page in any of 56 languages.

03
Export
Check the result and download it as TXT, DOCX, Markdown, CSV, HTML, JSON or PDF.

56	7	8	95–99%
LANGUAGES	EXPORT FORMATS	CLEANUP PASSES	ON CLEAN SCANS

The image never leaves your browser.
Recognition runs locally with WebAssembly. Only the text you choose to save goes to your library.
